Claims 1, 3, and 4 are amended.

Accordingly, claims 1-4, 6, 10, 19, 21, and 22 are pending.

1. (Currently amended) A method, comprising:

<u>a first electronic device</u> deriving a digital signature and associating the digital signature with a web page only if the web page includes code to invoke a control object; and

subsequent to associating the digital signature with the web page, the first electronic device delivering the web page to [[an]] a second electronic device capable of authenticating the digital signature such that the second electronic device can execute executes at least a portion of the web page after in response to authenticating the digital signature-is-authenticated.

(Original) The method as recited in claim 1, wherein the associating
further comprises attaching the digital signature to the web page.

 (Currently amended) The method as recited in claim 1, further comprising:

in an event that the web page does not include code to invoke the control object, the first electronic device delivering the web page without a digital signature.

4. (Currently amended) The method as recited in claim 1, wherein the web page includes a confirmation module that is used by the <u>second\_electronic</u> device to authenticate the digital signature.
